

## Modified worm management technology for sheep in Rajasthan

The programme includes one strategic drench during mid to late monsoon and one need based tactical drench during autumn/winter. The programme saves Rs. 12 / sheep / annum compared to conventional drench schedule without compromising the flock productivity. Comparative evaluation of conventional (2-3 drench/annum) and modified technology (one drench/annum) in sheep naturally infected with GIN at farmer level yielded a net gain of Rs. 100.57 /sheep/yr. as direct benefit on application of modified technology.
